Office Action Summary

Application No.

10/693,356

Applicant(s)

ASSA ET AL.

Examiner

Hai C. Pham

Art Unit

2861

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-19 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-19 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 25 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 11/17/03.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: ____.

DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because the content of the abstract is shorter than the recommended 50 words. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 3-5, 12-15, 17-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Ishikawa (U.S. 6,066,829).

With respect to claims 1 and 3, Ishikawa discloses a laser marking system and method for printing a spot on an object, the method comprising reflecting an incident light beam (LM) by a starting angle of less than ninety degrees to form a first reflected light beam (Fig. 3) (the incident angle of the laser beam on the first reflecting mirror 52 should be always less than ninety degrees so that the laser beam would not glide on the surface of the first reflecting mirror and that the reflected laser beam could reach the second reflecting mirror 54), varying the [starting] angle of reflection of the first reflected light beam by a pre-determined amount (by controllably rotating the first reflecting mirror 52 as shown by the double head arrow AA'), reflecting the first reflected light beam to form a second reflected beam (e.g., by reflecting the first reflected beam using the second reflecting mirror 54), varying the [starting] angle of reflection of the second reflected light beam (by controllably rotating the first reflecting mirror 54 as shown by the double head arrow BB'), and directing the second reflected beam to form a spot on an object (the beam reflected by the second reflecting mirror 54 being directed toward the workpiece W).

With respect to claims 4 and 17, Ishikawa discloses a first mirror (52), a first actuator (X axis galvanometer 56) attached to the first mirror, a second mirror (54), a second actuator (Y axis galvanometer 58) attached to the second mirror, and a controller (control 38) coupled to the first and second actuators (via electric cables 62, 64), the controller controlling the first actuator to cause the first mirror to reflect an incident light beam by a starting angle of less than ninety degrees to form a first reflected light beam, the first actuator being operable to tilt the first mirror and vary the

starting angle of reflection of the first reflected light beam by a predetermined amount, the controller controlling the second actuator to cause the second mirror to reflect the first reflected light beam to form a second reflected beam, the second mirror directing the second reflected beam to form a spot on an object, the second actuator being operable to tilt the second mirror and vary an angle of reflection of the second reflected light beam by a pre-determined amount (the respective swing angles of the first and second mirrors being predetermined by the X and Y-direction scanning control signals) (col. 7, lines 2-15).

With regard to claims 18 and 19, Ishikawa teaches the workpiece (W) being moved on the bench (18) such that the reflected beam scans the workpiece in both parallel and perpendicular directions with respect to the movement direction of the workpiece.

Ishikawa further teaches:

- wherein the second mirror reflects the first reflected light beam by less than ninety degrees to form the second reflected beam (so as to prevent the first reflected beam from gliding on the surface of the second reflecting mirror),
- the second reflected light beam is configured to alter an optical characteristic of a spot on the object (col. 1, lines 15-23),
- wherein second reflected light beam comprises a printing beam (LM) and a print zone beam (LG), the printing beam forming symbols (e.g., alphanumerical characters) on the object, the print zone beam outlining a visually observable

zone of printing on the object (the laser guide beam LG guiding and delimiting the area to be printed),

- electronics (control 38) to control the actuators to move the first and second mirrors such that the second reflected beam is directed to a plurality locations on the object,
- the actuators move the first and second mirrors to direct the second reflected beam to form at least one alphanumeric symbol on the object (Fig. 14).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 6-11, 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ishikawa.

With regard to claims 8-9, Ishikawa discloses the first and second mirrors (52 and 54) scan the laser beam LM in the X and Y directions and the workpiece W being disposed flat on a horizontal plane. It is clear that the printing by the second reflected beam would be in a vertical and a horizontal direction if the object were disposed vertically with respect to the second reflected beam.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to appropriately arrange the object to be printed with

Art Unit: 2861

respect to the incident exposure beam so as to have the exposure beam to scan horizontally and vertically, since it has been held that rearranging parts of an invention involves only routine skill in the art. In re Japikse, 86 USPQ 70.

With respect to claims 6-7 and 10-11, Ishikawa discloses the claimed invention except for the first and second mirrors reflecting the respective incident light beam by sixty degrees and the angle of reflection of the first and second reflected light beam to be varied by less than 10 degrees. However, such reflecting angle would be set optimally depending on the size of the printed area. It would have been obvious to one having ordinary skill in the art at the time the invention was made to set the reflecting angle of the laser beam as claimed, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

With respect to claim 16, Ishikawa discloses the power of the laser beam being controlled so as to form characters on the workpiece but does not explicitly teaches the laser source being a 10-Watt laser. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a laser source of appropriate power as claimed, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

7. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ishikawa in view of Woelki et al. (U.S. 5,329,090).

Ishikawa discloses all the basic limitations of the claimed invention except for the print pixel on the object comprising a plurality of spots.

Woelki et al. discloses a laser marking device for printing alphanumeric or bar-code characters on a silicon wafer, each character is formed of a plurality of pixels (macrogrids 60), each pixel comprising a plurality of dots (or dimples 57) (Fig. 6).

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to print pixel on the object comprising a plurality of spots in the device of Ishikawa as taught by Woelki et al. The motivation for doing so would have been to produce easily readable marking on the object as suggested by Woelki et al. at col. 3, lines 24-27.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hai C. Pham whose telephone number is (571) 272-2260. The examiner can normally be reached on M-F 8:30AM - 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David L. Talbott can be reached on (571) 272-1934. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2861

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
